

KELLY TANKS

pH Neutraliser

Easy to use pH neutralising liquid, safe alternative to acids & CO2.

Kelly Tanks pH Neutraliser is a neutralising buffer composed from Sodium Bicarbonate and its a conjugate base to stabilise the pH of a solution. Due to the logarithmic scale of pH the neutraliser is able to reduce high alkaline liquids to 7pH and maintain it there without risk of further reducing the pH to dangerous acidic levels.

pH Buffer reduces high alkaline liquid

Neutralises to safe level – no risk of overdosing

Ideal for concrete washoff operations

How to use:

Add 25-50ltrs to 500ltrs of high alkaline water.

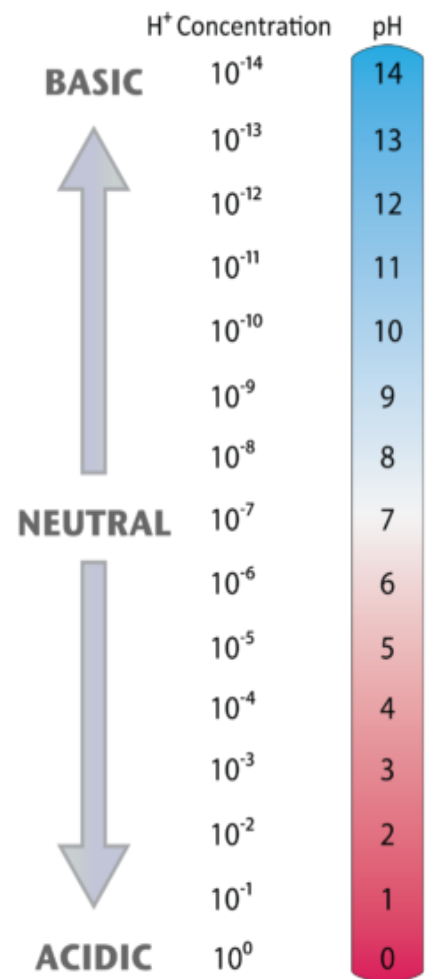

When used in closed loop/recycling system, (ie Kelly Tanks CWS Concrete Washout) 25-50ltrs will maintain pH for upto 150 washes.

pH should be periodically checked and more pH Neutraliser should be added until desired pH is achieved.

The pH Neutraliser will not overdose.
